

## Integration Agreement between JO Software and we-do-IT Flagship products cableScout® and LatLonGO® to be tightly coupled

Schwäbisch Gmünd, Melbourne 7/8/2014

### **cableScout® Network Management Software**

cableScout® is a cable management system developed by JO Software especially for the documentation and planning of Wide Area, Metropolitan Area, Access, and Local Area Networks. It allows the comprehensive data collection and transparent representation of even highly complex optical fiber, copper, broadband and FTTH structures. Within this framework, the software supports any type of transmission technique which can be administered at the logical, physical or virtual layer. cableScout® is found amongst companies of all sizes and industry sectors. They include telecommunications companies (service providers/carriers), public utilities, energy, gas, oil, water and cable-TV providers, airports, mining companies, highway administrations and engineering practices.

*“When we first came across LatLonGO® at the end of 2013 we were impressed by its concept, architecture, advanced functionality and ease-of-integration. We decided against developing our own Mobility solution in favor of adopting the software as an integrated cableScout®/LatLonGO® option and offering to our market” explains Ralph Kosztovits, Marketing Executive JO Software „our technical and marketing co-operation has been great and we are looking forward to show this exciting new cableScout® addition to our clients and new prospects”.*

**LatLonGO® is a GIS agnostic, SAP Certified ERP Mobility Solution** enabling the Spatial Enterprise, by providing “any data on any server to any client – anytime (offline)”. The LatLonGO® Mobility suite from we-do-IT provides strong business benefits to Enterprise Resource Planning (ERP) customers in the telco/utility industry enabling hundreds or thousands of mobile field crew to access back-end GIS for their inspection, field engineering or vegetation management tasks. Crews can red-line existing assets and return this information to the office for processing in their back-office GIS.

LatLonGO® has been created by geospatial IT specialists with 20+ years of Oracle, SAP, Smallworld, ESRI, Intergraph, spatialNET, etc... experience in GIS/ERP Integration including in-depth Utility and Telco domain expertise.

*“We realised the enormous potential and benefits for our customers in the telco space in bringing these two solutions together into a seamless integrated platform” explains Dr Walter Hesse, CEO of we-do-IT. “LatLonGO® provides the end-user with a system for distributing spatial Enterprise data to any touch client mobile device (iPad, Android, Windows7/8 tablets) off-line as well as SAP-UI and conventional web clients on-line. LatLonGO® compresses, encrypts and distributes data, allowing users to work in sometimes connected mode. Providing this kind of Mobility to the industry-leading cableScout® software is a real privilege”.*

## **About JO Software Engineering GmbH**

cabScout® is a network management system that has been specifically developed by JO Software Engineering for the professional documentation, planning and administration of complex telecommunications networks in the wide area, metropolitan area and access network sectors. cabScout® enables companies to comprehensively administer in one system all types and topologies of fibre optic and copper networks, together with inventory and connectivity details. The installed transmission and access technologies including SDH, PDH, xWDM, xPON, Ethernet/IP, xDSL and FTTx, can easily be administrated at the physical, logical and virtual layer. cabScout® can be found amongst companies of all sizes and industry sectors. They include telecommunications companies (service providers/carriers), public utilities, energy, gas, oil, water and cable-TV providers, airports, mining companies, highway administrations and engineering practices.

JO Software Engineering GmbH is a modern software company with over 25 years' experience in network technology and engineering. Since 1998 the company has focused on the development and sales of the leading network management software cabScout. According to the motto »standing still means falling behind«, a great deal of time and effort has been invested in innovation and in the further development of cabScout with the objective of always keeping ahead of the competition. That this objective has been achieved is reflected in the fact that the company now has over 250 customers for whom cabScout provides efficient network administration.

cabScout® reference sites include Vattenfall Europe Netcom, RWE Deutschland AG, UPC Austria, UPC Cablecom, EAG Oberösterreich, Luxconnect, Versatel Germany, EKZ Zurich, WINGAS/Gazprom, City of Yekaterinburg, WWZ Telecom, GAS & COM, ASTRA Swiss highway administration, Department of Transport Abu Dhabi, Orkufjarskipti Iceland, TV Kazaan, Netstar Moldawia and many more.
